

What We Do

ALROUF helps OEMs, factories, and supply-chain teams move selected repeat components and part families into disciplined Saudi production through route definition, pilot builds, and repeat manufacturing.

Core Entry Point — Localization Review

Start with one component, one sample, or one recurring part family. ALROUF returns a fit, no-fit, or conditional-fit view with route logic, tooling implications, and next steps.

Markets We Serve

- Industrial OEMs *(Primary)*
- Factory Outsourcing & Overflow *(Primary)*
- Vehicle & Mobility Components *(Controlled Growth)*
- Heavy Equipment & Machinery Parts *(Controlled Growth)*
- Defense-Adjacent Components *(Strategic Pathway)*

Capabilities & Contact

Manufacturing Capabilities

- Press-based repeat production (up to 300-ton class)
- Progressive die stamping (SENSON presses)
- KUKA robotic automation for part handling
- Plastic injection molding (support layer)
- Joining and subassembly
- Tooling coordination and route design

Best-Fit Part Families

- Brackets, supports, mounts
- Housings, covers, enclosures
- Clips, retainers, fastening forms
- Selected aluminum parts
- Metal-plastic subassemblies
- Outsourced OEM part families

What We Do NOT Accept

- ✗ One-off fabrication (not recurring)
- ✗ Heavy body-scale automotive structures
- ✗ Uncontrolled defense scope without readiness
- ✗ Vague inquiries without commercial logic
